22 MARCH 2023

Dear RBC Summer Tech Labs Team,

I am writing to express my interest in the Innovation Developer position for High School students at RBC Summer Tech Labs.

I am a high school student with a keen interest in software development and I am excited about the opportunity to gain hands-on experience in the field with RBC.

Over the last few years, I have developed my skills through numerous projects primarily using Python and Java. I have also applied these skills by entering competitions including a data science competition, several hacking competitions, and a science fair.

Now, I am eager to continue learning by creating solutions and contributing to RBC. There are three main factors that make me the perfect fit for this position.

First, I have the leadership skills and experience to solve problems collaboratively in a team environment. Through my position as the President of my school's Model United Nations chapter, I frequently attend conferences where I form relationships with other delegates in order to work towards innovative solutions to global issues. I also spend a significant amount of time training and mentoring new club members for their first conferences, organizing fundraisers for our club in order to reduce the barrier of entry, and working with our school's administration to ensure that trips to conferences occur safely. Being accountable to the club's success has helped me become a better team leader and member.

Second, I am constantly curious and hungry to learn how things work, especially with regards to technology. My programming journey began in middle school when I started to wonder what it would be like for me to create my own video games, rather than simply playing them, which led me into learning C# and Unity and using them to create a flight simulator for a science project. The same curiosity will help me approach projects at RBC with an innovative lens and a growth mindset.

Finally, I share the same values of inclusion and diversity as RBC. When solving a problem, I take a multifaceted approach and listen to a broad set of perspectives, in order to produce the best result possible.

I look forward to hearing from you soon. I can be reached by phone at (647)-674-2006 or through my email at hanznathanpo@gmail.com.

Thank you for your time.

Sincerely,

*Hanz Po*
